

Ein "Standardsensor" mit dem LoRaShield

LoraShield aufstecken

Bibliothek installieren

Um das Shield ansprechen zu können, muss die LMIC Bibliothek installiert werden:

Neues Device bei TTN erstellen

Nun benötigt man in der TTN Console eine Application und muss dort ein neues Device anlegen. Man vergibt einen Namen und lässt die übrigen Werte berechnen. Das Ergebnis sieht so aus, wie im Screenshot zu sehen.

Wichtig:

- Das Device muss als Activation Method ABP haben
- Um die passenden IDs im Sketch einzutragen, müssen diese das passende Format haben - die Darstellung kann man durch anklicken von <> umschalten.

Applications > qg_sensoren > Devices > beispielsensor

Overview Data Settings

DEVICE OVERVIEW

Application ID qg_sensoren

Device ID beispielsensor

Activation Method **ABP**

Device EUI <> msb { 0x00, , 0x5F, 0x80 }

Application EUI <> 70 B3 D5 7E D0 02 A7 D8

Device Address <> 26 01 1B 7F

Network Session Key <> msb { 0x7E, , .6, 0x1D, 0xCF, }

App Session Key <>

Status ● never seen
